

INSTALLATION INSTRUCTIONS

BEFORE YOU START:

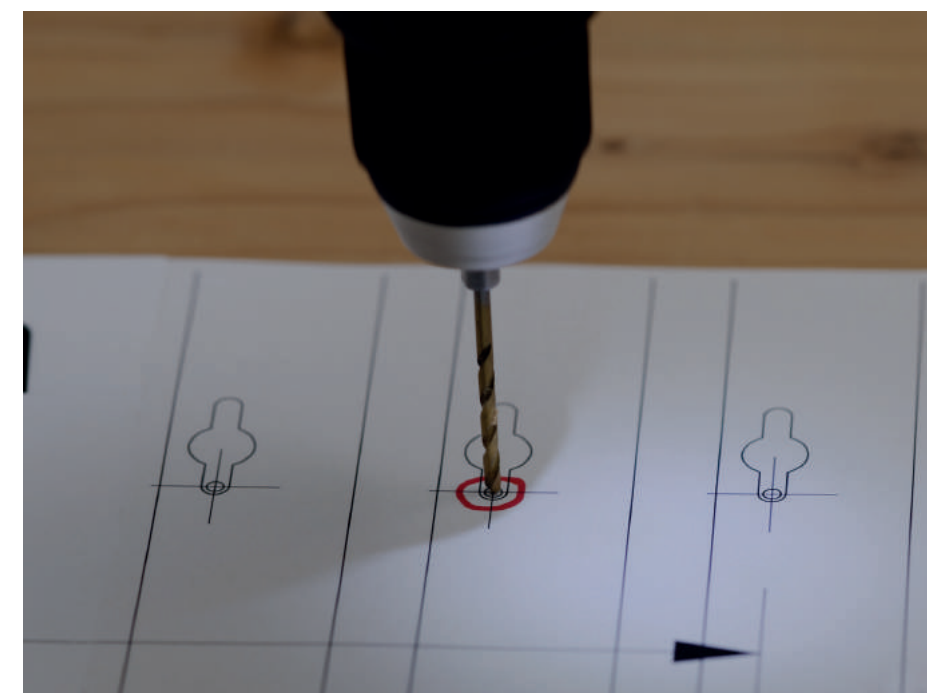

Prepare the four wood screws and drill hole template included with your kit. You'll also need a pen. If you can turn your table upside down, fixing will be easier and safer. If it is not possible to turn your desk over, assembly will be made easier with two people to hold and fit the unit.

STEP 1:

Place the template where you want the drawer, ensuring it's at the front lip of the desk and secure using tape.

STEP 4:

Using a bradawl or drill, make four small pilot holes at each marked location and remove the template.

STEP 2:

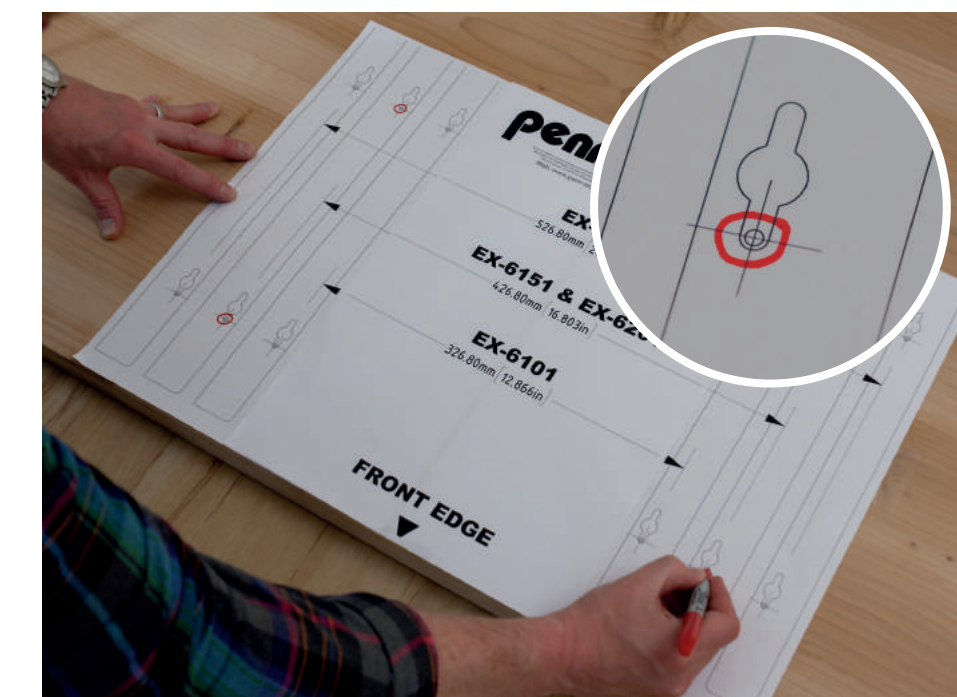

Identify your model number from the four options.

STEP 5:

Place the drawer into position over the pilot holes.

STEP 3:

Using a pen, mark the four screw locations on the template for your model.

STEP 6:

Screw firmly into place.

If you have fitted with the desk upside down, close and lock the drawer before turning over.
