

Home Delivery Box

SPB Series

WEATHER RESISTANT

Interior gasket sealing and a weather resistant powder coat to keep it safe from the elements.

CONTACT-FREE

Can be securely installed to porches, paths, gardens and driveways, ideal for home deliveries when occupants are unable to attend in person.

SAFE & SECURE

These highly secure steel delivery boxes are a weather-resistant and contact-free postbox solution.

There are three sizes available with a range of interior shelving designed to neatly accommodate a variety of items and avoid crushing. Stack parcels and letters separately from delicate items like fresh food or groceries. The weather resistant build ensures contents remain safe from rain, dust and snow.

The SPB is designed with a mechanical double bar locking system at the top and bottom of the door interior making it impossible to prise open. The bars slide into place using a manual rotary dial which is then secured by a combination lock. It's perfect for receiving deliveries without the need to be present, simply access them when convenient.

When a delivery is made, couriers can load the box and spin the combination dial to lock the door, ensuring contents are then safe until collected later.

Three sizes cater for various requirements with a small, medium and large option available, each with reversible doors plus knockouts at the rear to accommodate a separate wall mounting set.
